The Collaboration and Satisfaction With Patient Care Decisions (CSPCD) tool, reported in the article “Enhancing Nurse-Physician Collaboration Using Pediatric Simulation,” published in the July 2008 issue of *The Journal of Continuing Education in Nursing* (pp. 319-327), was an adaptation of a tool previously reported in the literature—the Collaboration and Satisfaction About Care Decisions (CSACD) tool. The original tool (the CSACD) is credited to Judith Gedney Baggs and was published in 1994 in “Development of an Instrument to Measure Collaboration and Satisfaction About Care Decisions,” *Journal of Advanced Nursing*, 20, 176-182.
