ERRATA

Typographic errors occurred in several equations presented in the following article (page 863), which appeared in the October 2009 issue of the *Journal of Refractive Surgery*. The corrected text follows below the citation.

For a 7.5-mm anterior radius, the front surface power (FSP) would be $50.133 \text{ D} \left(\frac{[1.376-1.000]}{0.0075}\right)$ and the average back surface radius would be $6.165 \text{ mm} \left(7.5 \times 0.822\right)$ with a back surface power (BSP) of $-6.488 \text{ D} \left(\frac{1336}{6.165}\right)$.

The calculated average anterior radius from the measured posterior radius would be $7.692 \text{ mm} \left(6.323/0.822\right)$ and the calculated K-reading $43.88 \text{ D} \left(\frac{[1337.5-1000]}{7.692}\right)$, a keratometric difference of $1.12 \text{ D} \left(45.00-43.88\right)$.
