1. According to Valente and Saunders, a study by McDonald et al. found that:

A. oncology nurses were most influenced by patient symptoms that were reliable indicators of depression.
B. oncology nurses tended to underestimate the level of depressive symptoms in patients with moderate or severe depression.
C. mental health nurses preferred clinical interviews over screening tools to determine if patients were depressed.
D. mental health nurses frequently used screening tools to determine patients’ risk for suicide.

2. Valente and Saunders indicated that clinicians only identify approximately what percentage of medical patients who are depressed?

A. 29%.
B. 39%.
C. 49%.
D. 59%.

3. Valente and Saunders noted that a total score of 11 to 17 on the Beck Depression Inventory indicates which of these levels of depression?

A. Normal.
B. Mild.
C. Moderate.
D. Severe.

4. Valente and Saunders suggested that when screening 100 clients for depression, clinicians can expect how many to screen positive for depression?

A. 5.
B. 6.
C. 7.
D. 8.

5. Valente and Saunders noted that the Hopelessness Scale for self-report of suicide risk differentiated among 3 of the following. Which one is the EXCEPTION?

A. Threateners.
B. Attempters.
C. Controls.
D. Ruminators.

6. Valente and Saunders indicated the Suicide Probability Scale has which of these subscales?

A. Psychache.
B. Anger.
C. Powerlessness.
D. Hostility.

7. Valente and Saunders noted that one classification of effective medications for treating depression was:

A. stimulants.
B. xanthenes.
C. selective serotonin reuptake inhibitors.
D. phencyclidines.

8. According to Matthews et al., the PRIMARY reason for implementing a smoking ban in their unit was:

A. staff’s concern about the health problems associated with smoking.
B. staff’s frustration with having to schedule assessments and therapeutic activities around patients’ smoking breaks.
C. patients’ desire for help overcoming their addiction to cigarettes.
D. patients’ comments that they could no longer afford cigarettes.

9. One statistically significant difference between groups before and after implementation of the smoking ban in the study by Matthews et al. was found in which of these variables?

A. Diagnostic composition.
B. Patient age.
C. Number of admissions.
D. Average daily consensus.

10. The study by Matthews et al. found no statistically significant difference between the groups before and after implementation regarding:

A. instances of contraband.
B. gender.
C. employment status.
D. socioeconomic status.

11. Which of these findings related to staff participants’ responses in the study by Matthews et al. is accurate?

A. Before implementation, all respondents believed the ban would be helpful.
B. Before implementation, no respondents believed the ban would be helpful.
C. After implementation, all respondents believed the ban had been helpful.
D. After implementation, no respondents believed the ban had been helpful.
12. Matthews et al. found that how many of the 12 postimplementation staff respondents thought the ban was ethical?
A. 4.
B. 6.
C. 8.
D. 10.

13. Matthews et al. identified which of the following as a limitation of their study?
A. The sample consisted solely of women.
B. Most of the patient participants were committed voluntarily.
C. Patients only remained in the unit for up to 3 days.
D. Lack of operational definitions of study variables.

14. According to Geary et al., the U.S. government has estimated that what percentage of adults has serious mental health problems?
A. 8%.
B. 10%.
C. 12%.
D. 14%.

15. Geary et al. noted that Taylor's faculty practice model included:
A. primary prevention.
B. advanced nursing practice.
C. universality.
D. unification.

16. Geary et al. reported that the faculty practice plan developed for their study was guided by which of these models?
A. Integration.
B. Collaboration.
C. Entrepreneurial.
D. Consultation.

17. Geary et al. used which of these types of sampling procedures?
A. Cluster.
B. Probability.
C. Stratified, purposive.
D. Stratified, random.

18. Geary et al. indicated that the highest score for needed community mental health service was:
A. school counseling.
B. health promotion.
C. parenting support.
D. management of chronic illness.

19. The community service that Geary et al. found to be least needed was:
A. palliative care.
B. women’s health.
C. assertiveness training.
D. behavior control.

20. One of the community services identified by participants that was not included in Geary et al.’s study instrument was:
A. increased government funding.
B. better education of health care providers.
C. greater emphasis on strategic planning.
D. bilingual, mostly Hispanic-oriented programs.
